

Introduction

Within the constraints of our Grade II listing, we aspire to improve our environmental and green performance year on year.

When we commenced the restoration of the Regal in 2008, our hope was to install geo-thermal systems however this proved impractical because of the level of the water table in our area.

Since then, we have examined ways in which we can achieve energy savings, reduce wastage and improve our sustainability strategy.

2018 achievements include:

Replacing our petrol fuelled company van with an electric vehicle.

Increased focus on local employment within walking/cycling or short drive distance.

Using local suppliers or local branches of national suppliers where possible.

Switching to a renewable energy electricity supplier.

Replacing our monthly programme with leaflets to reduce paper consumption.

Moving steadily towards a paperless office environment.

Seeking suppliers with good to excellent green credentials where possible.

Replacing plastic water bottles with recyclable glass bottles.

Replacing plastic drinking straws with recyclable paper straws.

Producing our own popcorn using recyclable paper containers.

Training the team to be aware of environmental impact.

Measuring wastage as key performance indicator across all business operations.

Reviewing at board level opportunities to improve our environmental / green credentials.

Future aspirations include obtaining environmental accreditation.
